JC4624
alpha glucosidase (EC 3.2.1.20) - Rhizomucor circinelloides f. circinelloides
cispecies: Rhizomucor circinelloides f. circinelloides
cispecies: Rhizomucor circinelloides f. circinelloides
cispecies: 10-May-1996 #sequence_revision 19-Jul-1996 #text_change 20-Jun-2000
cispeciesion: JC4624; PC4149
Els.Sugimoto, M.; Suzuki, Y.
J. Blochem. 119, 500-505, 1996

idues: 203-214,492-495,612-623;715-731;742-751;769-778 <SUG2>
idues: 203-214,492-495;612-623,715-731;742-751;769-778 <SUG2>
idues: 203-404,704 is an exo-carbohydrase, and catalyzes the splitting of an alphaent: extramily: 1ysosomal alpha-glucosidase; sucrase/isomaltase homology; trefoil homowords: 31ycoprocein; 31ycosidase; hydrolase
words: 31ycoprocein; 31ycosidase; hydrolase
%SOS/Domain: sucrase/isomaltase homology <SIM>
%SOS/Domain: sucrase/isomaltase homology <SIM>
%Active site: Asp #status predicted
                                         of a cDNA encoding alpha-gluco:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    22;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RNS-----PVYGPDIHFLSFTASFEEDDTLRIRFTDANNRRWEIPNEVLPRPPPPPS 119

A;Introns: 182/3: 231/2: 286/3; 319/1; 359/1; 398/3; 442/3; 479/3; 517/3; 546/1; 585/A;Introns: 182/3: 231/2: 286/3; 319/1; 359/1; 398/3; 442/3; 479/3; 517/3; 546/1; 585/A;Introns: 182/3: 231/2: 286/4; and GAA 4 are common alleles in the normal population
C;Function:
A;Note: GAA 1, GAA 2, and GAA 4 are common alleles in the normal population
A;Description: also has BC 3.1.2.3 activity; hydrolyzes alpha 1, 4 and alpha 1, 6 glyco
C;Fuperfamily: lysosomal alpha-glucosidase; bucrase/isomaltase homology complexed is glycoprotein; glycosidase; hydrolase; lycosomal storage disease; lysosome
C;Fuperfamily: lysosomal alpha-glucosidase; hydrolase; lycosomal storage disease; lysosome
